

E

Electricity

As with all US homes this home runs on 120v AC. If you are visiting from Europe this is a different voltage so please check any items you bring with you to ensure they can run on 120v. If you plug a 240v item into the sockets in the home you will very likely destroy your appliance or in best case it will not work.

For appliance you bring with you which do run on 120v AC you will need adaptors from either European or UK plug types to US outlets. These can be purchased from Publix in Championsgate or Walgreens or CVS on US27.
